I can't understand from the information provided, why a consumer needs to have increased charges to cover variance accounts. You profit millions of dollars. Right now the people of Oshawa, myself included, that are outside of being low income households, are struggling to pay bills. Another bill increase seems unreasonable when you are an incredibly profitable and able to leadership hundreds of thousands of dollars a year. I absolutely disagree with any increase, especially without a clear understanding as to the use of the accounts that you are covering or the 3 accounts you are creating. Surely these are operating costs that can be move than covered without causing Oshawa power to not be profitable.
