I do not understand why Oshawa PUC is able to artificially increase their costs for the 2026 Test Budget? I do not believe there will be an additional \$1.5M cost in Operations and \$1M cost in Admin and General. And why are they predicting a \$16.8M increase in the cost of power. There is a lot of new construction in Oshawa and the area. They will see an increase in revenue and profit through new users connecting to the grid. I do not agree that they need to increase the rate for all of their current clients.
