Dear Ms. Marconi:

**Re: Enbridge Gas 2026-2030 Demand Side Management Plan  
EB-2024-0198**

I am writing on behalf of Environmental Defence Canada (“EDC”) and the Green Energy Coalition (“GEC”) further to our letter of July 11, 2025. In our letter we indicated that we intended to initiate discussions with Enbridge regarding certain residential program design details and only file evidence on those details if necessary. We have spoken to Enbridge, which indicated that they were already intending to review residential program mechanisms seeing as their current program was implemented approximately six months ago. Enbridge indicated that:

- It will include the following issues in that review: (a) streamlining paperwork and requirements and (b) alternative options for HVAC contractors to size heat pumps and confirm appropriate sizing;
- It will endeavour to complete this initial review in time for implementation of any changes in January, if possible; and
- The above details and timing are subject to discussions with the IESO.

In light of the above, Environmental Defence is retracting its proposal to submit evidence on residential program design details and will first attempt to secure improvements through the above-referenced process. We have shared this draft letter with Enbridge, which confirmed that the above details on its upcoming review are accurate.

Yours truly,

Kent Elson
