**IN THE MATTER OF** the *Ontario Energy Board Act, 1998*, S.O. 1998, c.15 (Schedule B) as amended (the “Act”);

**AND IN THE MATTER OF** an Application by ENWIN Utilities Ltd. for an Order or Orders pursuant to section 78 of the Act approving or fixing a proposed schedule of distribution rates, retail transmission rates and other charges, effective January 1, 2026.

## **Application**

1. ENWIN Utilities Ltd. (the “Applicant” or “ENWIN”) hereby applies to the Ontario Energy Board (the “OEB” or “Board”) pursuant to section 78 of the *Ontario Energy Board Act, 1998* for approval of its proposed distribution rates, retail transmission rates and other charges effective from January 1, 2026, including the disposition of amounts accumulated in certain deferral and variance accounts.
2. On March 5, 2024, the Board granted ENWIN approval to defer the rebasing of its rates beyond the 2025 rate year and to extend its incentive rate-setting mechanism adjustment term until the 2028 rate year<sup>1</sup>. As a result, this Application, pre-assigned Board file number EB-2025-0043, proposes the sixth year of annual adjustments to the Applicant’s rates and charges pursuant to the Board’s 4th Generation Incentive Rate-Setting Mechanism (“Price Cap IR”). The Board established the foundation for the proposed rates and charges in the Applicant’s 2020 Cost of Service Rate Proceeding (EB-2019-0032). The Board then approved five subsequent annual adjustments to those rates and charges in ENWIN’s 2021 IRM Rate Proceeding (EB-2020-0017), 2022 IRM Rate Proceeding (EB-2021-0019), 2023 IRM Rate Proceeding (EB-2022-0027), 2024 IRM Rate Proceeding (EB-2023-0017), and 2025 IRM Rate Proceeding (EB-2024-0019).
3. The Applicant has followed the Board’s *Chapter 3 Filing Requirements for Electricity*

  - e. The continuation of Allowances and Loss Factors as approved in EB-2019-0032;
  - f. Disposition of the December 31, 2024 balances in its Group 1 Deferral and Variance Accounts (including Account 1595 (2022)) in the amount of \$3,172,907 which includes carrying charges calculated up to December 31, 2025, and the related class-specific rate riders effective for a 12-month period until December 31, 2026;

  - i. Approval of the annual mechanistic adjustment for the 2026 rate year to the Lost Revenue Adjustment Mechanism (“LRAM”) Eligible Amount for Prospective Disposition approved in EB-2022-0027, and related rate riders effective for a 12-month period until December 31, 2026.
- 5. The Applicant has utilized the rate model posted on the Board’s website on July 17, 2025. Board Staff has provided the Applicant with certain amendments to the standard Board model to facilitate a filing that is consistent with the Applicant’s Board-approved rate structure while utilizing the Board’s most recent model. The Applicant acknowledges that further adjustments and updates will be made post-submission by Board Staff in accordance with the Filing Requirements. The Applicant understands that it will be made aware of these adjustments and updates and have an opportunity to respond, if necessary, prior to a Board Decision and Order on this Application.
- 6. The Applicant requests that this Application be disposed of by way of a written hearing. In the event that the OEB is unable to provide a Decision and Order on this Application for implementation of rates effective January 1, 2026, the Applicant requests that the OEB issue

an Interim Rate Order declaring the Applicant's current Tariff of Rates and Charges as interim until the implementation date of the approved 2026 distribution rates. In the event that the effective date does not coincide with the Board's decided implementation date for 2026 distribution rates and charges, ENWIN requests approval to recover any forgone revenue from the effective date to the implementation date.

## **Manager's Summary**

### **Overview**

ENWIN Utilities Ltd. (the “Applicant” or “ENWIN”) filed a Cost of Service Application (EB-2019-0032) (“2020 Cost of Service Application”) with the Ontario Energy Board (“OEB” or “Board”) on April 26, 2019 pursuant to section 78 of the *Ontario Energy Board Act, 1998* (the “*OEB Act*”). Amongst other items, the 2020 Cost of Service Application sought approval of ENWIN’s proposed distribution rates and other charges, effective January 1, 2020. The Board issued its final Decision and Rate Order on the 2020 Cost of Service Application on December 5, 2019.

On August 17, 2020, ENWIN filed an application (EB-2020-0017) (“2021 IRM Rate Application”) for the first annual adjustment to the distribution rates established in the 2020 Cost of Service Application under the Board’s 4th Generation Incentive Rate-Setting Mechanism (“Price Cap IR”).<sup>3</sup> The Board issued its final Decision and Rate Order on the 2021 IRM Rate Application on December 10, 2020 for rates effective January 1, 2021.

On August 18, 2021, ENWIN filed an application (EB-2021-0019) (“2022 IRM Rate Application”) for the second annual adjustment to the distribution rates established in the 2020 Cost of Service Application under the Board’s 4th Generation Price Cap IR. The Board reviewed the 2022 IRM Rate Application in two phases, issuing its Decision and Rate Order on Phase 1 on December 9, 2021, and its Decision and Order on Phase 2 on February 24, 2022, for rates effective January 1, 2022.

On August 3, 2022, ENWIN filed an application (EB-2022-0027) (“2023 IRM Rate Application”) for the third annual adjustment to the distribution rates established in the 2020 Cost of Service Application under the Board’s 4th Generation Price Cap IR. The Board issued its final Decision and Rate Order on the 2023 IRM Rate Application on December 8, 2022 for rates effective January

<sup>3</sup> Report of the Board: Renewed Regulatory Framework for Electricity: A Performance-Based Approach, issued October 18, 2012.

1, 2023.

On August 17, 2023, ENWIN filed an application (EB-2023-0017) (“2024 IRM Rate Application”) for the fourth annual adjustment to the distribution rates established in the 2020 Cost of Service Application under the Board’s 4th Generation Price Cap IR. The Board issued its final Decision and Rate Order on the 2024 IRM Rate Application on December 14, 2023 for rates effective January 1, 2024.

On January 12, 2024, ENWIN filed a request with the OEB to defer the filing of its next Cost of Service (or “Rebasing”) rate application for a 3-year period. On March 5, 2024, the OEB approved ENWIN’s request, and placed ENWIN on the list of distributors whose rates will be scheduled for rebasing for the 2028 rate year. On August 15, 2024, ENWIN filed an application (EB-2024-0019) (“2025 IRM Rate Application”) for the fifth annual adjustment to the distribution rates established in the 2020 Cost of Service Application under the Board’s 4th Generation Price Cap IR. The Board issued its final Rate Order on the 2025 IRM Rate Application on December 19, 2024 for rates effective January 1, 2025.

This Application proposes the sixth annual adjustment to the distribution rates established in the 2020 Cost of Service Application. In particular, ENWIN is seeking approval for distribution rates effective January 1, 2026 under the Board’s 4th Generation Price Cap IR.

ENWIN has followed the OEB’s *Chapter 3 Filing Requirements for Electricity Distribution Rate Applications* (the “Filing Requirements”), issued on June 19, 2025. All rate adjustments sought have been determined using the 2026 IRM Rate Generator Model as issued by the Board, or pursuant to other Board directives, as applicable. Pursuant to Section 3.2.10 of the Filing Requirements, ENWIN hereby confirms that its 2024 achieved regulated Return on Equity was 10.33%, which makes it eligible to seek an adjustment to its base rates through the Price Cap IR.<sup>4</sup> In accordance with Section 3.1.2 of the Filing Requirements, all OEB approvals requested within this Application are summarized in Table 1 below.

### **2026 IRM Rate Generator Model**

ENWIN has included at **Appendix ‘A’** a copy of its 2025 Tariff of Rates and Charges from EB-2024-0019, which was issued in its final form on December 19, 2024. The rates and charges set out in that tariff form the starting point from which the proposed 2026 rates and charges have been calculated using the Board’s 2026 IRM Rate Generator Model.

ENWIN has completed the 2026 IRM Rate Generator Model and Board-directed calculations, a copy of which is set out at **Appendix ‘B’**. ENWIN has also confirmed the accuracy of the billing determinants and other information that was pre-populated in the 2026 IRM Rate Generator Model

by Ontario Energy Board Staff (“Board Staff”).

### Annual Adjustment Mechanism

The annual adjustment (“Price Cap adjustment”) follows an OEB-approved formula that includes components for inflation and the OEB’s expectations of efficiency and productivity gains. The components in the formula are issued by the OEB annually. The formula is a rate adjustment equal to the inflation factor minus the distributor’s X-factor. The X-factor is comprised of a productivity and stretch factor.

The Price Cap adjustment used in the 2026 IRM Rate Generator Model is 3.7%. This calculation is based on an inflationary price escalator of 3.7%, a productivity factor of 0.0% and a stretch factor of 0.0%. The 3.7% inflation factor is based on the Board’s approved inflationary adjustment for electricity distribution rates effective in 2026, issued June 11, 2025. The productivity factor is pursuant to Section 3.2.1 of the Filing Requirements, where the OEB has determined that the appropriate value for the productivity factor (industry total factor productivity) for the Price Cap IR and Annual IR Index is zero. ENWIN’s stretch factor has been populated based on ENWIN’s assignment to Group 1 in the Board’s *2023 Benchmarking Update for Determination of 2024 Stretch Factor Rankings*, issued August 6, 2024, which is the most recent stretch factor assignment available at the time of filing the Application.

### Revenue-to-Cost Ratio Adjustments

The Revenue-to-Cost Ratios approved by the Board in ENWIN’s 2020 Cost of Service Application were within the Board’s target ranges<sup>5</sup>; therefore, ENWIN is not applying for any adjustments to its Revenue-to-Cost Ratios in this Application.

### Summary of Proposed 2026 Distribution Rates

Table 2 below provides a summary of ENWIN’s 2025 approved distribution rates, and its proposed 2026 distribution rates, calculated using the 2026 IRM Rate Generator Model.

#### Electricity Distribution Retail Transmission Service Rates

On March 31, 2025, the Board issued *Guideline: Electricity Distribution Retail Transmission Service Rates and Low Voltage Charges* (the “RTSR Guideline”). The RTSR Guideline instructs electricity distributors to adjust their Retail Transmission Service Rates (“RTSRs”) based on a comparison of historical transmission costs, adjusted for new Uniform Transmission Rates (“UTRs”) and revenues generated from existing RTSRs.

ENWIN has used the 2026 IRM Rate Generator Model, Tabs 10 to 15, to calculate its proposed 2026 RTSRs in accordance with the RTSR Guideline. The UTRs used in the 2026 IRM Rate Generator Model reflect the final UTRs approved by the Board in its EB-2024-0244 Decision and Rate Order, issued January 21, 2025, which are effective January 1, 2025. ENWIN acknowledges the UTRs in the 2026 IRM Rate Generator Model may be updated subsequent to the filing of this Application for the purposes of determining RTSRs effective January 1, 2026. The RTSRs as proposed have been calculated in accordance with ENWIN’s past practice and as most recently approved in its 2025 IRM Rate Application, to reflect that not all of ENWIN’s rate classes are

charged the Transformation Connection rate.

On March 31, 2025, the Board released the *Electric Vehicle Charging Rate Overview – Final Report* (the “EVC Rate Report”)<sup>6</sup>, which sets out the requirements and details of the new Electric Vehicle Charging Rate (“EVC Rate”) that electricity distributors must implement for the 2026 rate year. The EVC Rate will offer a reduction to the RTSRs charged to eligible EV charging stations who elect to participate.

Pursuant to section 3.2.4 of the Filing Requirements, ENWIN has estimated the quantity of load (energy and demand) used by customers expected to qualify for the EVC Rate based on the last full year of actual data (2024). This volume is reported exclusively within the designated EV charging line and is not included in the remainder of the General Service 50 to 4,999 kW rate class. ENWIN utilized both internal and publicly accessible data sources and exercised reasonable judgement to estimate what customers may meet the eligibility criteria outlined in the EVC Rate Report.

Table 3 below provides a summary of ENWIN’s 2025 approved RTSRs, and its proposed 2026 RTSRs, calculated using the 2026 IRM Rate Generator Model.

### Other Rates and Charges

ENWIN seeks continuation of the other rates and charges as set out in the list below for the 2026 rate year, subject to required inflationary increases for certain charges as determined by the OEB, in addition to any other update requirements pursuant to OEB direction subsequent to the filing of this Application:

- microFIT Service Charge;
- Smart Metering Entity Charge;
- Wholesale Market Service Charge;
- Capacity Based Recovery;
- Rural or Remote Electricity Rate Protection;
- Standard Supply Service Administrative Charge;
- Transformer Allowance for Ownership;

- Primary Metering Allowance for Transformer Losses;
- Specific Service Charges;
- Retail Service Charges;
- Loss Factors; and
- Gross Load Billing of Line and Transformation Connection Services.

### **Disposition of Group 1 Deferral and Variance Account Balances**

ENWIN last disposed of its Group 1 deferral and variance account (“DVA”) balances (including Account 1595 (2021)) (“Group 1 balances”) in its 2025 IRM Rate Application. This disposition reflected audited account balances as of December 31, 2023, and was approved by the Board on a final basis.

In this Application, ENWIN is seeking Board approval to dispose of its audited Group 1 balances as of December 31, 2024 (including projected interest up to December 31, 2025) on a final basis, including the balance in its Account 1595 sub-account for vintage year 2022. The balances in ENWIN’s Account 1595 sub-accounts for vintage years 2023 and 2024 are not yet eligible for disposition. ENWIN is proposing a 12-month period for the disposition of its Group 1 balances, consistent with Section 3.2.6 of the Filing Requirements, and confirms that no adjustments have been made to any deferral and variance accounts balances that have been previously approved by the OEB for disposition on a final basis.

The OEB’s *Electricity Distributors’ Deferral and Variance Account Review Initiative Report* (EB-2008-0046) (“EDDVAR Report”) provides that, during the IRM plan term, Group 1 accounts are to be reviewed and disposed of if the pre-set disposition threshold of \$0.001 per kWh is exceeded, whether in the form of a debit or credit.

As summarized in the 2026 IRM Rate Generator Model at **Appendix ‘B’**, Tab 4 - Billing Det. for Def-Var, the Group 1 deferral and variance account balances considered for disposition in this Application exceed the pre-set disposition threshold in total. ENWIN’s 2024 actual year-end total balance for Group 1 deferral and variance accounts being sought for disposition, including interest projected to December 31, 2025, is a debit of \$3,172,907 (including Account 1595 (2022)). This

amount results in a total debit claim of \$0.0015 per kWh, which exceeds the pre-set disposition threshold of \$0.001 per kWh. In addition, the total Group 1 balance excluding Account 1589 – RSVA Global Adjustment is a debit of \$739,104, which is a material balance to be recovered from customers, while the Account 1589 – RSVA Global Adjustment balance is a debit balance of \$2,433,803, which is a material balance to be recovered from Class B Non-RPP customers. As these balances are material and are to be recovered from different subsets of customers, ENWIN has proposed disposition of the audited December 31, 2024 Group 1 Account balances herein (including Account 1595 (2022)), which are summarized in Table 4 below. Disposition in this Application will also help to limit the impacts of inter-generational inequity, by refunding or recovering amounts from customers who are more likely to be the customers who contributed to the establishment of the account balances.

*Table 4 – Summary of Proposed Disposition of Group 1 Deferral and Variance Account Balances*

Group 1 Accounts	Account Number	Total Principal	Total Interest	Total Claim

ENWIN notes that there is one difference on Tab 3 of the 2026 IRM Rate Generator Model at **Appendix ‘B’** between the 2024 Balance (Principal + Interest) and the RRR balance as at December 31, 2024.

For Account 1580 – RSVA Wholesale Market Service Charge, a variance of \$990,693 is shown. This amount matches the Account 1580 - Variance WMS - Sub-account CBR Class B, 2.1.7 RRR balance of \$990,693. Pursuant to footnote 5 of Tab 3, the RRR balance for Account 1580 – RSVA

Wholesale Market Service Charge should equal the control account as reported in the RRR, and would include the balance for Account 1580 - Variance WMS - Sub-Account CBR Class B. However, these balances are shown separately on the Continuity Schedule. Therefore, this variance is expected.

The general Group 1 DVA rate riders are calculated on Tab 7 of the 2026 IRM Rate Generator Model at **Appendix ‘B’**. A summary of the proposed general Group 1 DVA rate riders is provided in Table 5 below:

*Table 5 – Summary of Proposed Group 1 DVA Rate Riders*

Proposed January 1, 2026 EB-2025-0043			
Rate Class	Charge Determinant	Deferral / Variance	
		General Deferral / Variance Account Rate Rider	Account Rate Rider for Non-WMP (if applicable)
Residential	kWh	\$0.0003	
GS < 50 kW	kWh	\$0.0003	
GS 50 - 4999 kW	kW	\$0.1262	\$0.0300
Large Use - Regular	kW	\$0.1604	\$0.0385
Dedicated TS	kW	\$0.1671	\$0.0412
Unmetered	Per Connection	\$0.11	
Sentinel	Per Connection	\$0.05	
Street Light	Per Connection	\$0.01	

As is further detailed below, ENWIN notes that the rate riders for the Unmetered, Sentinel and Street Light rate classes have been determined on a “per connection” basis, consistent with ENWIN’s historical approach for these rate classes.

Pursuant to the OEB’s IRM Rate Generator – DVA Tabs Instructions document (“DVA Instructions”), ENWIN has ensured that the balances in Account 1580 – RSVA Wholesale Market Service Charge, Account 1580 - Variance WMS - Sub-Account CBR Class B, Account 1588 – RSVA Power, and Account 1589 – RSVA Global Adjustment have not been allocated to Wholesale Market Participants.

### Commodity Accounts 1588 and 1589

On February 21, 2019, the OEB issued a letter providing accounting guidance related to Account 1588 - RSVA Power, and Account 1589 - RSVA Global Adjustment.<sup>7</sup> This accounting guidance was effective January 1, 2019 and was to be implemented by August 31, 2019.<sup>8 9</sup>

As noted in ENWIN's 2020 Cost of Service proceeding (EB-2019-0032), ENWIN confirms it has implemented the OEB's February 21, 2019 accounting guidance effective from January 1, 2019.

### Commodity Account Analysis Workform

Section 3.2.6.1 of the Filing Requirements states that all distributors are required to complete and submit the Commodity Account Analysis Workform for each year that has not previously been approved by the OEB for disposition, irrespective of whether they are seeking disposition of the Account 1589 – RSVA Global Adjustment balance as part of their current application. The Commodity Account Analysis Workform helps the OEB to assess if the total annual variance that is recorded to Account 1589 – RSVA Global Adjustment is reasonable, as it compares the actual general ledger transactions recorded during the year to an expected balance that is calculated based on monthly GA volumes, revenues and costs.

ENWIN has completed the Commodity Account Analysis Workform pursuant to the Board's instructions for 2026 rates, which is attached as **Appendix 'E'**. All years prior to 2024 have been disposed of on a final basis, with the most recent disposition occurring in ENWIN's 2025 IRM Rate Application. ENWIN has completed the reconciliation to within the stated 1.0% threshold of the difference as a percentage of expected GA Payments to the Independent Electricity System Operator ("IESO"). ENWIN's Account 1588 – RSVA Power balance is also within the stated 1.0%

---

<sup>7</sup> OEB Letter, Accounting Guidance related to Accounts 1588 RSVA Power and 1589 RSVA Global Adjustment, issued February 21, 2019.

<sup>8</sup> This accounting guidance was subsequently updated on May 23, 2023 as a result of the implementation of the Ultra-Low Overnight Regulated Price Plan, although the accounting guidance for the commodity pass-through accounts was not substantially changed.

<sup>9</sup> The OEB also issued updated accounting guidance for the commodity accounts under the Market Renewal Program ("MRP") on April 28, 2025, which superseded the prior accounting guidance. However, this finalized Accounting Guidance takes effect on the effective date of MRP (May 1, 2025) and thus does not impact the account balances sought for disposition in this Application.

threshold of the Account 4705 – Cost of Power Purchased for the year. Further details and explanations are provided in **Appendix ‘E’**.

#### Global Adjustment – Class B Customers

Account 1589 - RSVA Global Adjustment captures the difference between the GA amounts billed (or estimated to be billed) by the distributor to Class B Non-RPP customers and the actual amount paid by the distributor to the IESO (or host distributor) for those customers in a given year. In this Application, ENWIN has proposed disposition of a debit balance in Account 1589 – RSVA Global Adjustment of \$2,433,803, which reflects the audited balance of the account as at December 31, 2024 (adjusted for 2025 dispositions approved by the OEB), along with interest calculated up to December 31, 2025.

When clearing balances from Account 1589 – RSVA Global Adjustment, the DVA Instructions dictate that distributors must establish a separate rate rider to be included in the delivery component of the bill that would apply prospectively to Class B Non-RPP customers. The billing determinants and all the rate riders for the Global Adjustment disposition are to be calculated on an energy basis (kWh), regardless of the billing determinant used for distribution rates for the particular rate class. The 2026 IRM Rate Generator Model also allocates a portion of the Account 1589 - RSVA Global Adjustment balance to customers who transitioned between Class A and Class B based on customer-specific consumption levels. All transition customers are only responsible for the customer-specific amounts allocated to them and are not charged/refunded the general GA rate rider.

Of the total balance of \$2,433,803, \$35,450 is applicable to specific customers who transitioned between Class A and Class B during the period the balance in the account accumulated (transitioned on July 1, 2024). ENWIN had two General Service 50 to 4,999 kW customers move from Class B to Class A. In addition, ENWIN had three General Service 50 to 4,999 kW customers move from Class A to Class B. As such, ENWIN has completed Tab 6 Class A Consumption Data, Tab 6.1a GA Allocation and Tab 6.1 GA of the 2026 IRM Rate Generator Model using a 12-month period for the disposition of the specific transitional GA rate riders. The total amounts allocated to these five transitional customers are summarized in Table 6 below:

*Table 6 – Summary of Customer Specific GA Allocation for the Period When They Were a Class B Customer*

<b>Transitional Customer</b>	<b>Customer Specific GA Allocation for the Period When They Were a Class B Customer</b>	<b>Monthly Equal Payments</b>
Customer 1	\$11,247	\$937
Customer 2	\$8,433	\$703
Customer 3	\$808	\$67
Customer 4	\$7,008	\$584
Customer 5	<u>\$7,953</u>	<u>\$663</u>
<b>Total</b>	<b>\$35,450</b>	<b>\$2,954</b>

The general GA rate rider applicable to all other Class B Non-RPP customers is a debit of \$0.0050 per kWh, as shown on Tab 6.1 of the 2026 IRM Rate Generator Model.

#### Capacity Based Recovery

In May 2015, the IESO introduced a new wholesale market service charge to recover costs associated with contracted demand response providers active in the wholesale energy market. The program was previously known as Capacity Based Demand Response and is now known as Capacity Based Recovery (“CBR”). ENWIN has followed the Board’s Accounting Guidance issued on July 25, 2016, titled *Accounting Guidance - Capacity Based Recovery* (“CBR Accounting Guidance”) for the calculation of the 2024 CBR balance.

#### *Class A*

In accordance with the CBR Accounting Guidance, the Class A CBR charges are allocated fully to Class A customers’ bills each month. Accordingly, there is no Class A CBR balance to dispose of in this Application.

#### *Class B*

In this Application, ENWIN is requesting to dispose of an Account 1580 - Variance WMS - Sub-Account CBR Class B debit balance of \$739,459.

In accordance with ENWIN's past practice, and to ensure that a Group 1 rate rider is created to the required decimal places for all rate classes, the entire amount has been transferred into the Account 1580 – RSVA Wholesale Market Service Charge control account to be disposed through the general purpose Group 1 DVA rate riders, which are summarized in Table 5 above. The general purpose Group 1 DVA rate riders are inclusive of Class A transitional customers, therefore no portion of the CBR Class B amount has been allotted to Class A transitional customers on Tab 6.2a CBR B\_Allocation in the 2026 IRM Rate Generator Model.

#### Account 1595

Section 3.2.6.3 of the Filing Requirements states that applicants are expected to seek final disposition of the residual balances in Account 1595 sub-accounts for each vintage year only once. Distributors only become eligible to seek disposition of these residual balances two years after the expiry of the rate rider (i.e. in the fourth rate year after the year the rate rider expires). During the two years after the expiry of the rate rider, distributors may still make billing corrections as per the Retail Settlement Code and record the related transactions in the associated Account 1595 sub-account.

ENWIN last disposed of its Account 1595 - Sub-account (vintage 2021) in its 2025 IRM Rate Application. Pursuant to the Filing Requirements, ENWIN is now eligible to dispose of the Account 1595 - Sub-account (vintage 2022), as these rate riders expired December 31, 2022, and the remaining residual balance as at December 31, 2024 has been audited. Therefore, the Account 1595 – Sub – account (vintage 2022) debit balance of \$51,418 has been selected for disposition on Tab 3 of the 2026 IRM Rate Generator Model at **Appendix 'B'**. The balance has been allocated to rate classes on Tab 4 of the 2026 IRM Rate Generator Model in proportion to the recovery share of the original balances when the rate riders were established in ENWIN's 2022 IRM Rate Application (EB-2021-0019).

Vintages 2023 and 2024 of Account 1595 are not yet eligible for disposition. ENWIN will propose to bring these balances forward for disposition in future rate applications once permitted by the Filing Requirements.

**Lost Revenue Adjustment Mechanism Variance Account Disposition**

Pursuant to Section 3.2.7.1 of the Filing Requirements, ENWIN confirms it does not have a balance in its Account 1568 Lost Revenue Adjustment Mechanism Variance Account (“LRAMVA”) and is thus not seeking disposition of a LRAMVA balance in its 2026 IRM Rate Application. ENWIN fully disposed of the remaining balance in its LRAMVA related to previously established LRAMVA thresholds in its 2023 IRM Rate Application.

**Annual Update to Rate Riders for Prospective LRAM-Eligible Amounts**

In the OEB’s EB-2022-0027 Decision and Rate Order, the OEB approved ENWIN’s LRAM-Eligible Amounts for Prospective Disposition for years 2023 to 2027. These amounts were reflected in Table 1-c of the final LRAMVA Workform in ENWIN’s 2023 IRM Rate Application, and in Table 7.2 of the EB-2022-0027 Decision and Rate Order. The amounts approved are summarized in Table 7 below, reflected in 2022 dollars.

*Table 7 – Summary of Previously-approved LRAM-Eligible Amounts*

<b>Year</b>	<b>LRAM-Eligible Amount (\$ 2022)</b>
2023	(\$5,085)
2024	(\$11,687)
2025	(\$13,321)
2026	(\$15,149)
2027	(\$37,368)

In accordance with Section 3.2.7.1 of the Filing Requirements and the LRAMVA Workform Instructions, ENWIN has calculated the annual mechanistic adjustment for the 2026 LRAM-Eligible amount listed above. The mechanistic adjustment is calculated per the below formula, the effect of which is to bring the previously-approved amount into 2026 dollars.

Previously approved 2026 LRAM eligible amount (in 2022\$) \* (2023 OEB approved inflation minus X- factor) \* (2024 OEB approved inflation minus X- factor) \* (2025 OEB-approved inflation minus X-factor) \* (2026 OEB-approved inflation minus X-factor)

The results of this calculation, and the derivation of the applicable rate riders, are shown in Table 8 below. These amounts have been input on Tab 19 – Additional Rates of the 2026 IRM Rate Generator Model for purposes of being included in ENWIN’s proposed 2026 Tariff of Rates and Charges. The applicable rate riders are proposed to be effective for a 12-month period until December 31, 2026.

## **Tax Changes**

Section 3.2.8 of the Filing Requirements prescribes a 50/50 sharing of the impacts of legislated tax changes that have occurred when compared against the distributors’ tax rates embedded in its OEB-approved base rates known at the time of the Application. The 2026 IRM Rate Generator Model will calculate an applicable rate rider using the appropriate customer class data underlying the OEB approved rates.

As noted on Tabs 8 and 9 of the 2026 IRM Rate Generator Model, ENWIN’s base rates established in its 2020 Cost of Service proceeding encompassed all known tax changes, including the impacts of Bill C-97. The change related to the Small Business Deduction phase-out noted in the Filing Requirements is also not applicable to ENWIN. Therefore, a tax change rate rider is not being requested in this Application.

ENWIN has recorded the pre-2020 impacts of the Bill C-97 Capital Cost Allowance rule changes

in Account 1592 - PILs and Tax Variances – CCA Changes, which will be brought forward for review and disposition in a future proceeding.

### **Proposed 2026 Tariff of Rates and Charges**

ENWIN has included at **Appendix ‘C’** a copy of its proposed 2026 Tariff of Rates and Charges from the 2026 IRM Rate Generator Model. With respect to the Unmetered, Sentinel and Street Light rate classes, the 2026 IRM Rate Generator Model’s Tariff Sheet contains “per connection” rates and charges for certain line items, consistent with ENWIN’s historical approach for these rate classes. Rates for these classes have been calculated on a per connection basis in the 2026 IRM Rate Generator Model for Monthly Service Charges and Group 1 Deferral and Variance Account rate riders.

### **Summary of Proposed 2026 Bill Impacts**

The bill impacts of ENWIN’s proposed 2026 IRM Rate Application are summarized in Table 9 below. These bill impacts were calculated using the 2026 IRM Rate Generator Model and are based on the Board’s criteria as set out in the April 14, 2016 *Report of the Board – Defining Ontario’s Typical Residential Customer* (EB-2016-0153). ENWIN has included at **Appendix ‘D’** a copy of the January 1, 2026 Bill Impacts Summary from the 2026 IRM Rate Generator Model.

The primary drivers contributing to the estimated “Total Bill” impacts across most rate classes include the annual inflationary adjustment to distribution rates, partially offset by a reduction in the debit (recovery) amounts associated with the disposition of Group 1 Deferral and Variance Accounts balances, as well as a proposed decrease in RTSRs. For Non-RPP customers, an increase in the debit (recovery) amount for the Global Adjustment Account rate rider from the 2025 to the 2026 rate year has resulted in an upward pressure on total bill impact. No total bill impacts for any rate class exceed the Board-mandated 10% threshold – therefore, no mitigation plans are necessary.

*Table 9 – Summary of Proposed 2026 Bill Impacts*

Rate Class	RPP / Non-RPP	Sub-Total A (Excl. Pass Through)		Total Bill	
		\$	%	\$	%

### **Certification of Evidence**

As part of the Filing Requirements, an application filed with the OEB must include a certification by a senior officer that the evidence filed, including the models and appendices, is accurate, consistent and complete to the best of their knowledge, as well as that distributor has robust processes and internal controls in place for the preparation, review, verification and oversight of the account balances being disposed, consistent with the certification requirements in Chapter 1 of the Filing Requirements.

Chapter 1 of the Filing Requirements also requires that an application filed with the OEB include a certification by a senior officer of the distributor stating that the application and any evidence filed in support of the application does not include any personal information (as that phrase is defined in the *Freedom of Information and Protection of Privacy Act*) unless it is filed in accordance with Rule 9A of the OEB’s Rules of Practice and Procedure (and the Practice Direction on Confidential Filings, as applicable).

The Certification of Evidence is attached as **Appendix ‘G’**.

Where a customer operates an advertised business from a building that may or may not be used as a dwelling, EnWin Utilities Ltd. may elect to deem that the customer's rate class will be General Service. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

For all OEB-Approved dispositions, please ensure that the disposition amount has the same sign (e.g: debit balances are to have a positive figure and credit balance are to have a negative figure) as per the related OEB decision.

<sup>1</sup> Please provide explanations for the nature of the adjustments. If the adjustment relates to previously OEB-Approved disposed balances, please provide amounts for adjustments and include supporting documentations.

<sup>2</sup> 1) If the LDC's rate year begins on January 1, 2025, the projected interest is recorded from January 1, 2024 to December 31, 2024 on the December 31, 2023 balances adjusted to remove balances approved for disposition in the 2024 rate decision.

2) If the LDC's rate year begins on May 1, 2025, the projected interest is recorded from January 1, 2024 to April 30, 2025 on the December 31, 2023 balances adjusted to remove balances approved for disposition in the 2024 rate decision.

<sup>3</sup> The individual sub-accounts as well as the total for all Account 1595 sub-accounts is to agree to the RRR data. Differences need to be explained: For each Account 1595 sub-account, the transfer of the balance approved for disposition into Account 1595 is to be recorded in "OEB Approved Disposition" column. The recovery/refund is to be recorded in the "Transaction" column. Any vintage year of Account 1595 is only to be disposed once on a final basis. No further dispositions of these accounts are generally expected thereafter, unless justified by the distributor.

Refer to Filing Requirements for disposition eligibility of the sub-accounts. Select "yes" column BU if the sub-account is requested for disposition. Note that Account 1595 (2021), (2022), (2023) will not be eligible for disposition in the 2024 rate application.

<sup>4</sup> New accounting guidance effective January 1, 2019 for Accounts 1588 and 1589 was issued Feb. 21, 2019 titled Accounting Procedures Handbook Update - Accounting Guidance Related to Commodity Pass-Through Accounts 1588 & 1589. The amount in the "Transactions" column in this DVA Continuity Schedule are to equal the transactions in the General Ledger (excluding any amounts approved for disposition, which is shown separately in the "OEB Approved Disposition" columns). Any true-ups/adjustments/reversals needed to derive the claim amount must be shown separately in the "Principal Adjustments" columns of this DVA Continuity Schedule.

<sup>5</sup> RRR balance for Account 1580 RSVA - Wholesale Market Service Charge should equal to the control account as reported in the RRR. This would include the balance for Account 1580, Variance WMS – Sub-account CBR Class B.

Incentive Rate-setting Mechanism Rate Generator  
for 2026 Filers

Data on this worksheet has been populated using your most recent RRR filing.

If you have identified any issues, please contact the OEB.

Have you confirmed the accuracy of the data below?

Yes

If a distributor uses the actual GA price to bill non-RPP Class B customers for an entire rate class, it must exclude these customers from the allocation of the GA balance and the calculation of the resulting rate riders. These rate classes are not to be charged/refunded the general GA rate rider as they did not contribute to the GA balance.

Please contact the OEB to make adjustments to the IRM rate generator for this situation.

# Incentive Rate-setting Mechanism Rate Generator for 2026 Filers

This tab allocates the GA balance to transition customers (i.e Class A customers who were former Class B customers and Class B customers who were former Class A customers) who contributed to the current GA balance. The tables below calculate specific amounts for each customer who made the change. The general GA rate rider to non-RPP customers is not to be charged to the transition customers that are allocated amounts in the table below. Consistent with prior decisions, distributors are generally expected to settle the amount through 12 equal adjustments to bills.

The purpose of this tab is to calculate the GA rate riders for all current Class B customers who did not transition between Class A and B in the period since the Account 1589 GA was last disposed. Calculations in this tab will be modified upon completion of tab 6.1a, which allocates a portion of the GA balance to transition customers, if applicable.

Effective January 2017, the billing determinant and all rate riders for the disposition of GA balances will be calculated on an energy basis (kWhs) regardless of the billing determinant used for distribution rates for the particular class (see Chapter 3, Filing Requirements)

At EnWin 's request OEB Staff has modified sheet 7 to have the Rate Rider for Deferral/Variance Account disposition (2025)be by per connection for USL, sentinel and streetlighting.

<sup>1</sup> When calculating the revenue reconciliation for distributors with Class A customers, the balances of sub-account 1580-CBR Class B will not be taken into consideration if there are Class A customers since the rate riders, if any, are calculated separately.

<sup>2</sup> Only for rate classes with WMP customers are the Deferral/Variance Account Rate Riders for Non-WMP (column H and J) calculated separately. For all rate classes without WMP customers, balances in account 1580 and 1588 are included in column G and disposed through a combined Deferral/Variance Account and Rate Rider.

### Notes

1. The appropriate Federal and Ontario small business rates are calculated in the Income/PILs Workform. The Federal and Ontario small business deduction:

- a. is applicable if taxable capital is below \$10 million.
- b. is phased out with taxable capital of more than \$10 million.
- c. is completely eliminated when the taxable capital is \$50 million or more.

This is effective for taxation years starting in 2023. Prior to 2023, the small business deduction was completely eliminated when taxable capital was \$15 million or more.

2. The OEB's proxy for taxable capital is rate base.

In the green shaded cells, enter billing detail for wholesale transmission for the same reporting period as the billing determinants on Tab 10. For Hydro One Sub-transmission Rates, if you are charged a combined Line and Transformer connection rate, please ensure that both the Line Connection and Transformation Connection columns are completed.  
If any of the Hydro One Sub-transmission rates (column E, I and M) are highlighted in red, please double check the billing data entered in "Units Billed" and "Amount" columns. The highlighted rates do not match the Hydro One Sub-transmission rates approved for that time period. If data has been entered correctly, please provide explanation for the discrepancy in rates.

In the Green Cells below, enter all proposed rate riders/rates.  
 In column A, select the rate rider descriptions from the drop-down list in the blue cells. If the rate description cannot be found, enter the rate rider descriptions in the green cells. The rate rider description must begin with "Rate Rider for".  
 In column B, choose the associated unit from the drop-down menu.  
 In column C, enter the rate. All rate riders with a "\$" unit should be rounded to 2 decimal places and all others rounded to 4 decimal places.  
 In column E, enter the expiry date (e.g. April 30, 2026) or description of the expiry date in text (e.g. the effective date of the next cost of service-based rate order).  
 In column G, a sub-total (A or B) should already be assigned to the rate rider unless the rate description was entered into a green cell in column A. In these particular cases, from the dropdown list in column G, choose the appropriate sub-total (A or B). Sub-total A refers to rates/rate riders that are considered as pass through costs (eg. LRAMVA and ICM/ACM rate riders). Sub-total B refers to rates/rate riders that are considered pass through costs.

## GROSS LOAD BILLING NOTE

The Billing Demand for Line and Transformation Connection Services is defined as the Non-Coincident Peak demand (MW) in any hour of the month. The customer demand in any hour is the sum of (a) the loss adjusted demand supplied from the distribution system plus (b) the demand that is supplied by embedded generation installed after October 30, 1998, which have installed capacity of 2MW or more for renewable generation and 1 MW or higher for non-renewable generation. The term renewable generation refers to a facility that generates electricity from the following sources: wind, solar, Biomass, Bio-oil, Bio-gas, landfill gas, or water. The demand supplied by embedded generation will not be adjusted for loss.

## Incentive Rate-setting Mechanism Rate Generator for 2026 Filers

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. **Those distributors that are still in the process of moving to fully fixed residential rates should refer to section 3.2.3 of Chapter 3 of the Filing Requirements for Incentive Rate-Setting Applications.**

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

**Note:**

1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA of \$0.1596/kWh (IESO's Monthly Market Report for May 2025) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.

2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

# Commodity Accounts Analysis Workform for 2026 Rate Applications

Formerly "GA Analysis Workform"

Version 1.0

Model Unlocked

Input cells  
Drop down cells

Utility Name ENWIN Utilities Ltd.

## Note 1

For Account 1589 and Account 1588, determine if a or b below applies and select the appropriate year related to the account balance in the drop-down box to the right.

- a) If the account balances were last approved on a final basis, select the year of the year-end balances that were last approved on a final basis.
- b) If the account balances were last approved on an interim basis, and
- i) there are no changes to the previously approved interim balances, select the year of the year-end balances that were last approved for disposition on an interim basis. OR
  - ii) there are changes to the previously approved interim balances, select the year of the year-end balances that were last approved for disposition on a final basis. An explanation should be provided to explain the reason for the change in the previously approved interim balances.

(e.g. If the 2022 balances that were reviewed in the 2024 rate application were to be selected, select 2022)

Year Selected

2023

### Instructions:

1) Determine which scenario above applies (a, bi or bii). Select the appropriate year to generate the appropriate Commodity Accounts Analysis Workform tabs, and information in the Principal Adjustments tab and Account 1588 tab.

For example:

- Scenario a -If 2023 balances were last approved on a final basis - Select 2023 and a Commodity Accounts Analysis Workform for 2024 will be generated. The input cells required in the Principal Adjustment and Account 1588 tabs will be generated accordingly as well.
- Scenario bi - If 2023 balances were last approved on an interim basis and there are no changes to 2023 balances - Select 2023 and a Commodity Accounts Analysis Workform for 2024 will be generated. The input cells required in the Principal Adjustment and Account 1588 tabs will be generated accordingly as well.
- Scenario bii - If 2023 balances were last approved on an interim basis, there are changes to 2023 balances, and 2022 balances were last approved for disposition - Select 2022 and Commodity Accounts Analysis Workforms for 2023 and 2024 will be generated. The input cells required in the Principal Adjustment and Account 1588 tabs will be generated accordingly as well.

2) Complete the Commodity Accounts Analysis Workform for each year generated.

3) Complete the Account 1588 tab. Note that the number of years that require the reasonability test to be completed are shown in the Account 1588 tab, depending on the year selected on the Information Sheet.

4) Complete the Principal Adjustments tab. Note that the number of years that require principal adjustment reconciliations are all shown in the one Principal Adjustments tab, depending on the year selected on the Information Sheet.

See the separate document Commodity Accounts Analysis Workform Instructions for detailed instructions on how to complete the Workform and examples of reconciling items and principal adjustments.

a) Please provide an explanation in the text box below if columns G and H for unbilled consumption are not used in the table above.

ENWIN is able to obtain actual billed usage from its Customer Information System that is prorated into the proper month based on the meter read start and end date. Therefore, actual usage applicable to each calendar month is able to be obtained and there is not a need to adjust for the previous or current month's unbilled estimates in columns G and H.

b) Please provide an explanation in the text box below if the difference in loss factor is greater than 1%

Cumulative	40,732	-	40,732	-	0.0%

**Notes**

- 1) The transactions should equal the "Transaction" column in the DVA Continuity Schedule. This is also expected to equal the transactions in the general ledger (excluding transactions relating to the removal of approved disposition amounts as that is shown in a separate column in the DVA Continuity Schedule)
- 2) Reconciling items and Principal Adjustments reflect the total of Note 7a "Reconciling Items and Principal Adjustments". Reconciling items represent the items that are recorded in the current period but are related to the prior periods. These items are booked in the GL in the appropriate period and as such do not need to be included in the principal adjustments. However, the reconciling items should be excluded for the purpose of the reasonability test for Account 1588.
- 3) Principal adjustments should equal the "Principal Adjustments" column in the DVA Continuity Schedule. Principal adjustments adjust the transactions in the general ledger to the amount that should be requested for disposition.

Note 7a **Reconciling Items and Principal Adjustments - complete for each year where Account 1588 as a % of Account 4705 is greater than + / - 1% of that year's cost of power purchased (Note 7, above)**

Notes

- 1) The "Transaction" column in the DVA Continuity Schedule is to equal the transactions in the general ledger (excluding transactions relating to the removal of approved disposition amounts as that is shown in a separate column in the DVA Continuity Schedule)
- 2) Any principal adjustments needed to adjust the transactions in the general ledger to the amount that should be requested for disposition should be shown separately in the "Principal Adjustments" column of the DVA Continuity Schedule
- 3) The "Variance RRR vs. 2024 Balance" column in the DVA Continuity Schedule should equal principal adjustments made in the current disposition period. It should not be impacted by reversals from prior year approved principal adjustments.
- 4) Principal adjustments to the pro-ration of CT 148 true-ups (i.e. principal adjustment #1 in tables below) are expected to be equal and offsetting between Account 1588 and Account 1589, if not, please explain. If this results in further adjustments to RPP settlements, this should be shown separately as a principal adjustment to CT 1142/142 (i.e. principal adjustment #2 in tables below)

Chapter 3 - Incentive Rate-Setting Applications Updated on June 19, 2025

Filing Requirement Section/Page Reference	IRM Requirements	Evidence Reference, Notes
17	A distributor with a zero balance in the LRAMVA should indicate this fact in its application and advise that it is not requesting any disposition. If a distributor with zero balance in the LRAMVA is requesting rate rider(s) for current rate year rates to recover an LRAM-eligible amount approved in a previous proceeding, the distributor should reference the previous OEB decision where the base LRAM-eligible amount for the current rate year (i.e., the amount prior to the mechanistic adjustment) was approved, and provide the calculations used to generate the requested LRAM-eligible rate riders (i.e., the mechanistic adjustment and the allocation to rate classes). Distributors are to input the resulting rate rider(s) in Tab 19 – Additional Rates of the IRM Rate Generator Model. Distributors in this circumstance do not need to file the LRAMVA workform or any additional documentation	Manager's Summary, pp. 22-23 2026 IRM Rate Generator Model, Tab 19
<b>For Distributors with non-zero balance in the LRAMVA</b>

17 - 18	Provide supporting evidence related to disposition of any balance in the LRAMVA (refer to Section 3.2.7.1 of the 2023 edition of the Chapter 3 Filing Requirements)	N/A
17 - 18	For persisting impacts until the next rebasing, calculate and request approval of LRAM-eligible amounts to address amounts that would otherwise be recorded in the LRAMVA for all years until their next rebasing application, and request any rate rider(s) for the LRAM-eligible amount	N/A
<b>3.2.7.2 Continuing Use of the LRAMVA for New NWS Activities</b>		
18	Statement whether it is requesting an LRAMVA for one or more of these activities, if this request has not been addressed in a previous application	N/A
<b>3.2.8 Tax Changes</b>		
18 - 19	Tabs 8 and 9 of Rate Generator model are completed, if applicable	Yes
18 - 19	If a rate rider to the fourth decimal place is not generated for one or more customer classes, the entire sharing tax amount is be transferred to Account 1595 for disposition at a future date	N/A
<b>3.2.9 Z-Factor Claims</b>		
20	Eligible Z-factor cost amounts are recorded in Account 1572, Extraordinary Event Costs. Carrying charges are calculated using simple interest applied to the monthly opening balances in the account and recorded in a separate sub-accounts of this account	N/A
20	To be eligible for a Z-factor claim, a distributor must demonstrate that its achieved regulatory return on equity (ROE), during its most recently completed fiscal year, does not exceed 300 basis points above its deemed ROE embedded in its base rates	N/A
<b>3.2.9.1 Z-Factor Filing Guidelines</b>		
20	Evidence that costs incurred meet criteria of causation, materiality and prudence In addition, the distributor must: - Notify OEB by letter of all Z-Factor events within 6 months of event - Apply to OEB to recover costs recorded in the OEB-approved deferral account claimed under Z-Factor treatment - Demonstrate that distributor could not have been able to plan or budget for the event and harm caused is genuinely incremental - Demonstrate that costs incurred within a 12-month period and are incremental to those already being recovered in rates as part of ongoing business risk - Provide the distributor's achieved regulatory ROE for the most recently completed fiscal year	N/A
20 - 21		N/A
<b>3.2.9.2 Recovery of Z-Factor Costs</b>		
21	Description of manner in which distributor intends to allocate incremental costs, including rationale for approach and merits of alternative allocation methods	N/A
21	Specification of whether rate rider(s) will apply on fixed or variable basis, or combination; length of disposition period and rational for proposal	N/A
21	Residential rate rider to be proposed on fixed basis	N/A
21	Detailed calculation of incremental revenue requirement and resulting rate rider(s)	N/A
<b>3.2.10 Off-Ramps</b>		
21	If a distributor whose earnings are in excess of the dead band nevertheless applies for an increase to its base rates, it needs to substantiate its reasons for doing so	N/A
21	A distributor is expected to file its regulated ROE, as was filed for 2.1.5.6 of the RRR. However, if in the distributor's view this ROE has been affected by out-of-period or other items (for example, revenues or costs that pertain to a prior period but recognized in a subsequent one), it may also file a proposal to normalize its achieved regulated ROE for those impacts, for consideration by the OEB	Manager's Summary, p.9
<b>3.3.1 Advanced Capital Module</b>

<b>3.3.2 Incremental Capital Module</b>		
23 - 25	If updated cost projects are 30% greater than pre-approved amount, distributor must treat project as new ICM, re-filed business case and other relevant material required	N/A

25	An analysis demonstrating that the materiality threshold test has been met and that the amounts will have a significant influence on the operation of the distributor	N/A
25	Justification that the amounts to be incurred will be prudent - amounts represents the most cost-effective option (but not necessarily the least initial cost) for ratepayers	N/A
25	Justification that amounts being sought are directly related to the cause, which must be clearly outside of the base upon which current rates were derived	N/A
25	Evidence that the incremental revenue requested will not be recovered through other means (e.g., it is not, in full or in part, included in base rates or being funded by the expansion of service to include new customers and other load growth)	N/A
25	Details by project for the proposed capital spending plan for the expected in-service year	N/A
25	Description of the proposed capital projects and expected in-service dates	N/A
