

LETTER OF COMMENT

Comments:

I am deeply concerned about the affordability of energy and the burden this increase would place on households and businesses already struggling with rising costs. Many families and seniors in our community are on fixed incomes and cannot absorb further increases. Small businesses, too, will struggle to remain competitive if energy costs continue to climb. I urge the Board to closely examine whether this increase is truly necessary. The company must demonstrate that it has pursued all possible efficiencies before passing costs on to consumers. Ratepayers should not be expected to fund excessive corporate profits, executive compensation, or inefficiencies. I respectfully ask that you protect the public interest by rejecting or significantly reducing the proposed increase. Thank you for your consideration.
