

LETTER OF COMMENT

Comments:

In 2024, Enbridge gas reported earnings of \$5.1 billion and will be increasing their shareholder dividends in 2025. At a time when many Canadians are struggling with the current economy and providing necessities to their families - such as rising grocery costs. As a monopoly with a growing customer base Enbridge should be delivering efficiencies to lower costs not passing increases onto consumers. The inflation based formula does not justify this hike when productivity gains and existing profits can absorb cost pressures. Customers continue to experience inaccurate billing estimates and steadily rising fixed charges which undermines trust. Last year Bill 165 overrode OEB and forced us to contribute to expand their monopoly. The OEB has a mission to "We protect the interests of consumers and deliver public value". Please do so in rejecting this price hike that would enrich those at Enbridge at a time that the average citizen needs every bit of fiscal security to weather the threat from the south.
