

LETTER OF COMMENT

Comments:

Please accept this as my consumer feedback, in protest of the file # EB-2025-0163; Enbridge submission to once again increase our energy costs. In my last Enbridge invoice, my usage is almost nil as this is summer and only a pilot light is on, but the cost has increased 43% over last July. Since last July, the carbon tax was lifted and yet Enbridge claims in their file submission that they need to replace that revenue. The current 43% increase is noted on my invoice as "Other Enbridge Charges" and they consist of 3 separate rate adjustments plus HST. These rate adjustments total \$27.68 in a single month when virtually no gas is being used. If they are approved to enforce the increases of file EB-2025-0163, this will increase my rate adjustment charges another \$3 per month, or an overall increase of 48% in a single year. I can not imagine what my gas bill will be once we have to turn on the furnace. Someone needs to be accountable and someone needs to challenge the validity of this insane cost increase. Again, 48% in a single year. Thank-you for your time and in reading this.
