Mr. Ritchie Murray
Acting Registrar
Ontario Energy Board
2300 Yonge Street, 27th floor
Toronto, ON M4P 1E4

Dear Mr. Murray:

Re: Algoma Power Inc. (“API”) - 2026 IRM Application -Applicant Status Update

Since filing its Application and Interrogatory Responses, API has worked towards further reconciliation explanations of its Commodity Account Workform, specifically regarding 2024 account balances.

API is pleased to update the OEB that it has successfully identified further reconciling items which lower the remaining variances for 2024. While the unexplained variance for Account 1588 is now within the 1% threshold and the unexplained variance for Account 1589 has declined, the 1589 variance remains outside the 1% threshold.

As a result of the 2024 balance in 1589 remaining outside of the 1% threshold, API still cannot propose disposition of the 2024 balances in the commodity accounts at this time, and the total of accounts eligible for disposition remains below the threshold test of total claim/kWh.

API’s proposal for Group 1 DVA disposition therefore **remains unchanged** from API’s Application/ Interrogatories- no Group 1 disposition is being requested for the reasons outlined above.

Sincerely,

Oana Stefan
