Dear Remy Fernandes:

Re: Application for 2027 Electricity Rates

The OEB is in receipt of Grimsby Power Incorporated's (Grimsby Power) January 19, 2026 letter requesting a deferral, for one year, of its rebasing of rates beyond the 2027 rate year (Letter). The OEB has reviewed the Letter and requires additional information before rendering its decision on the request for deferral.

Grimsby Power's Letter provides no specific reasons for why a scheduled rebasing application could not be submitted for 2027. The OEB requests Grimsby Power to explain why a deferral for one year, as sought by Grimsby Power, is necessary and in the public interest in this case.

Additionally, Grimsby Power has provided information in its deferral request related to SAIDI and SAIFI performance in 2024 – both of which were reported above target values. The OEB requests Grimsby Power further explain why these results are not within its control and how it intends to address the results in 2027 and beyond, should a one year deferral be granted by the OEB.

Upon receipt of the above, the OEB will review and determine the next steps.

Yours truly,

Ritchie Murray
Acting Registrar
