To the Ontario Energy Board,

Regarding InnPower's application to rebase rates in 2027 instead of 2029:

1. 25% Real Increase on Same Tariff: Despite staying on the exact same Tiered structure, my electricity bill increased by 25% compared to last August, and 16% compared to September 2025. InnPower's actual billing outpaces any reasonable inflation or efficiency claims.
2. InnPower consistently ranks among the most expensive local distribution companies in Ontario (3rd–5th highest out of ~58 LDCs). Shifting the burden onto residents rather than controlling internal operating costs demonstrates a failure to optimize operations.
3. In an environment of local job losses and rising living costs, InnPower is supposed to prove management compensation and bonuses cuts, also dividend structures before seeking early rate adjustments. As said before-they being top 5 most expensive is not a reason for annual wage increase or annual bonus.
4. Volume Growth vs. Operational Logic: Based on my 15 years of experience in logistics and supply chain, increased volume and customer density must lead to lower unit costs and operational efficiencies, not price hikes. Innisfil's rapidly growing population should lower per-capita infrastructure costs, yet InnPower is attempting to do the exact opposite two years ahead of schedule.
I ask the OEB to maintain the original 2029 rebasing timeline and mandate a review of InnPower's operational cost controls.
5. Ontario has abundant water and hydroelectric power. Yet inPower electricity costs here can exceed those in resource-poor islands and desert countries, where consumers also benefit from lower overall tax burdens.

Thank you for considering these arguments.

BR,

Nataliia Prikhodko
