

BY EMAIL and WEB POSTING

October 9, 2026

**To: All Licensed Electricity Transmitters
Independent Electricity System Operator
All Other Interested Parties**

**Re: Invitation: Webinar on the OEB's Regulatory Framework and the Toronto
Third Line**

What You Need to Know

- **The Ontario Energy Board (OEB) is hosting a webinar and Q&A session on the Toronto Third Line (TTL) procurement.**
- **The webinar will help interested parties understand the OEB's regulatory framework for electricity transmitters and how it may interact with the TTL procurement process.**
- **The webinar will be held on November 24, 2026 at 9:30 a.m. Interested parties are invited to register and submit questions in advance to help inform the discussion.**

Background

The TTL is a proposed underwater transmission cable connection between Clarington (Bowmanville Switching Station) and downtown Toronto via Lake Ontario.

On June 18, 2026, the Minister of Energy and Mines [directed](#) the Independent Electricity System Operator (IESO) to select the transmitter that will design, build and operate the TTL through a competitive procurement process.

The IESO is currently undertaking a series of engagement activities to inform the development of the TTL procurement framework and its supporting documents, including the TTL procurement contract to be signed by the successful bidder. Based on the IESO's current roadmap, these engagements are expected to continue through

2026 and into early 2027, with the procurement process anticipated to commence in the second quarter of 2027.

The webinar is intended to give interested parties an opportunity to better understand the OEB's role and discuss OEB-related regulatory considerations before the procurement process begins.

Webinar Details

The webinar will be held at **9:30 a.m. on November 24, 2026**. Interested participants can register to attend by using the Microsoft Teams webinar registration page [here](#). Registered participants will automatically receive a confirmation email containing information with instructions on how to join the webinar. Relevant materials will be made available following the event.

The webinar will include:

- an overview of the OEB's regulatory framework for electricity transmitters and how it may apply to the selected TTL transmitter; and
- a Q&A session with OEB staff.

The OEB invites interested stakeholders to submit topics for consideration and/or questions in advance to IndustryRelations@oeb.ca by October 23, 2026. Please ensure that "OEB TTL webinar" is included in the subject line. Questions received will be treated confidentially and will help inform webinar agenda and content.

Participants will also have an opportunity to ask questions and engage in discussion during the webinar. Given the ongoing development of the TTL procurement framework, some topics may warrant further discussion as the procurement process progresses. The OEB will continue to consider whether additional engagement activities would be beneficial as further information becomes available, such as future webinars or other opportunities for stakeholder engagement.

Questions relating primarily to the procurement process may be referred to the IESO or shared with the IESO for consideration through its engagement activities.

For more information on this project, visit the [Toronto Third Line webpage](#) on IESO.ca.

Yours truly,

Ritchie
